

## Assembly Instruction 05/2015

video instructions: <http://www.zeitraum-moebel.de/>

### enclosed:

- rubber mallet + allen key
- adjustable feet (glued-in)
- distance bar
- dowel + screw
- felt pads

### required:

- drilling machine

### 1.

Determine the right position of the shelf. Keep the wall-upright against the wall to mark the position for the borehole. The wall-upright is the one with the metal bed-fitting and the notch for the skirting.

### 2.

Drill the hole and tighten the screw until just 8 mm of the screw are still visible. Place the wall-upright with the bed fitting on the screw head and push down until it stops.

### 3.

Align the wall-upright vertically and start to hook the shelves into the upright from the bottom to the top. Make sure that the correct sides of the shelves are facing down (with the 3° angle), so that the shelves and the upright fit well into place.

### 4.

Press down the shelves slightly. They cannot slide off because they are wedged together with the wall-upright. Afterwards slide the right upright in the slots of the shelves. Start again at the bottom lifting the shelves a little bit.

### 5.

After the right side slide the left upright into the frontside of the shelves. Start again at the bottom lifting the shelves a little bit. When all parts are wedged together, place the distance bar between shelves and wall to determine the right distance.

### 6.

Use the rubber mallet to pat the shelves until they are lined up with the uprights.

### 7.

Then pat every shelves lightly with the rubber mallet. But please do not hit the short side of the shelf!

### 8.

Adjust the feet.

### 9.

Remove the distance bar and place the felt pads. The pads are responsible for a constant distance to the wall and also for the stability of the shelves. Fill the gap between the wall and shelves with as many felt pads stuck together as you need. Place them at the points shown.
